Gentlemen:

FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF THE SECRETARY

Recent information has been noted with regard to your NPRM 92-289 which we understand is in response to the American Radio Relay League petition for a 150 KHZ segment at the low end of the 222 MHZ amateur band.

Our radio club (which includes over 100 members) has maintained a fully coordinated repeater for many years! Our input frequency (222.140 MHZ) is allocated in this segment.

Needless to say, changing a repeater frequency assignment is not a simple task, what with trips to the site, retuning of cavity duplexers, new crystals, realignment etc. Also, additional expenses will be incurred in order to achieve the above.

Also, and very important, a new frequency pair would have to be obtained, which would hopefully be free from interference or intermod problems. These problems seem to plague many repeaters these days.

We, therefore, wish to go on record in opposition to the proposed 150 KHZ segment. Perhaps a 100 KHZ segment would be ample for the weak signal operators.

When we inquire at our regular club meetings who is involved with weak signal use on 220 MHZ there is no response! Where are these operators?

May we respectfully remind the F.C.C. that some years back when incentive licensing was instituted, many of us up-graded to advanced or extra class, and we received only 25 KHZ segments. Why should 150 KHZ be necessary for weak signal use?

Please give consideration to the comments we are hereby making.

Attached hereto is a list of our members who attended our last meeting and want to be on record as opposing the proposal.

Sincerely yours,
E.T.S. of N.J.
